Survey

SUNET ID (number)

What is your academic status?

Are you enrolled through:

What is your major, intended major, or primary field of study?

What is the most recent mathematics, statistics, or probability course you have completed? Please include the course number and institution if applicable.

How comfortable are you with probability and statistics?

Does this course fulfill a requirement for your degree or program? (e.g., Ways of Thinking/Ways of Doing, major requirement, elective, etc.)

Why are you taking this course?

What are you hoping to get out of this course? (Skills, topics, applications, or experiences you would especially like to gain.)

Is there anything else you'd like the instructional staff to know about your background or goals? (Optional)

Responses

Participant	Question	Response
Youxi Lin 07/02/26 03:05 PM PDT	1	017549620
	2	High school student
	3	Stanford Summer Session
	4	Not entirely sure but something math related maybe
	5	Intro to Calculus (Calculus A equivalent) at Russian School of Math
	6	Basic familiarity
	7	No
	8	I want to explore probability more, as it's not something that we do in depth in our school math curriculum.
	9	Knowledge on how to apply probability in different circumstances
	10	N/A
Luiza Leme (Unregistered) 06/22/26 11:29 AM PDT	1	17552612
	2	Undergraduate
	3	Stanford Summer Session
	4	B.S. Psychology
	5	statistics course in my university (Fauldade Sirio Libanes, Brazil)
	6	Basic familiarity
	7	No
	8	To complement my curriculum and career
	9	Quantitative and rational skills for complex decision making
	10	I don't have a lot of quantitative and probability skills.

	4	Ms&e
	5	I took a statistics course 10 years ago from imam abdulrahman bin faisal university
	6	Completed one introductory course
	7	Yes
	8	Degree requirement
	9	Knowledge
	10	I'm worried that i'm not a fit to the class, it would be helpful if i can see the homeworks and content early on to drop early if needed
Hamilton Sharpe (Unregistered)	1	017550783
06/22/26 11:28 AM PDT	2	Incoming frosh
	3	Visiting student program
	4	MS&E
	5	AP Calculus BC at TWCPHS
	6	Completed one introductory course

	7	Yes
	8	I want to take a MS&E course so that I can get a feel for the major, this specific course caught my eye as I am interested in decision making and statistics
	9	A better understanding of how to apply decision making principles and a feel for MS&E
	10	I am a football player at Stanford (long snapper) and in the Marine Corps reserves (why my head is shaved)
Alice Chen (Unregistered)	1	017549477
06/22/26 01:23 PM PDT	2	High school student
	3	Stanford Summer Session
	4	My intended major is business or something regarding marketing
	5	<i>No response</i>
	6	Basic familiarity
	7	No
	8	I have always been interested in personal planning and decision making, wanting to think about best outcomes when it comes to a singular decision. I was inspired to take this course because of the way people are able to mathematically (maybe?) calculate the probability and statistics of things happening, or decisions being made.
	9	I hope to be able to apply decision analysis in my everyday life, whether it be a small decision or life altering. Being able to solve problems or formulate answers to certain decisions would also be a skill that I hope to practice in this course.
	10	I hope to be able to learn in a way so I can better absorb information, so when I fiddle around or doodle, please know that I am paying attention and listening fully.

	3	Stanford Summer Session
	4	My intended major is Business Analytics, leading into a master's degree of Sports Analytics/Sports Management.
	5	This past year in High School (I attended Notre Dame Academy, Worcester MA), I completed Statistics Advanced Honors (extremely similar to the material in Advanced Placement Statistics). I also completed Advanced Honors Pre-Calculus.

	6	Completed multiple courses
	7	No
	8	I am very interested in both psychology and statistics. I am very passionate about exploring the two and how they can coexist together in all types of situations. I am truly excited to explore both the mental and mathematical size of decision-making, tying back to my want to study business analytics in college.
	9	I would say more technique using spreadsheets. I have basic knowlegde about spreadsheets, but I would love to become more experienced in spreahsheet work.
	10	My goal is to have a better understanding of decision making by the end of this course. I am very excited to be a part of this course, and look forward to learning new material throughout the class periods!

	4	Ethics in Society, Economics
	5	algebra 2, and euclidean and analytic geometry (castilleja school)
	6	No prior experience
	7	No
	8	I am taking this course because I want to learn more about the process of decision making, and how to better make decisions. My overall hope is to be able to use the tools and processes taught in this course as a resource to help make more informed decisions in areas of business, ethics, and education.
	9	I am hoping to learn more about how ethics plays a role in decision making, and how to apply the tools and processes learned to the areas of equal education and businesses and leadership.
	10	While I am not very experienced in statistics or probability, I would love to be able to gain a decent understanding of the basics to support my progress throughout this course. If there are any resources or things you recommend I do to familiarize myself with this topic to aid my success in this course, please let me know as I would love to learn more.
Kai Jie Tan (Unregistered)	1	kjt04

06/22/26 04:27 PM PDT	2	Undergraduate
	3	Stanford Summer Session
	4	Business management and entrepreneurship

	5	Quantitative methods at Maastricht university
	6	Completed one introductory course
	7	Yes
	8	Because i want to know the reasoning behind decisions, so that i can adapt myself better to possible outcomes
	9	Being able to anticipate decisions
	10	Not really but i like reading a lot and i read thinking fast and slow by kahnnemann
Emmie Sakry (Unregistered)	1	1754916
06/22/26 04:35 PM PDT	2	High school student
	3	Stanford Summer Session
	4	I hope to major in data science or something that incorporates statistics and engineering.
	5	I have completed AP Statistics and AP Calculus BC at Arapahoe High School.
	6	Completed one introductory course
	7	No
	8	I am taking Introduction to Decision Analysis because I appreciate and am fascinated by the ways in which mathematical and objective ways of thinking can be applied to circumstances which are often navigated with emotion and subjective reasoning. One of my primary passions is math and therefore I love to learn how math can be applied to fields/areas which we would often assume it couldn't be (or is too complicated to do so). I also want to potentially explore a career as an actuary, so I thought this class could be helpful in developing sound decision-making skills in finance and the business world.
	9	I hope to learn how to apply probability to complicated, real-life situations which involve deeper critical thinking beyond, for example, the flip of a coin. As previously stated, I also hope that this course will inform me on relevant subjects related to actuarial science. Along with this, I believe the course will serve me well in developing my general decision-making skills so that I can grow to be successful and accomplished.
	10	<i>No response</i>

	3	Stanford Summer Session
	4	Potentially MS&E
	5	In Norway I had maths where I did probability and statistics for roughly 6 months, but this was a little over a year ago so I will be revising to make sure I can do all coursework.
	6	Completed one introductory course
	7	Yes
	8	I am taking this course because I am interested to learn about how I can make better decisions in not only engineering but also life and I want to see if this course is capable of answering this question for me. I also want to learn about the behavior of other individuals and how it can be explained. I also have an interest in taking this course further in the future so it holds some more importance to as why I picked the course in that aspect.
	9	I might have previously explained some of the reasons but I also think that I could help to apply these lessons I learn in this course to some of my life and to help me re-assess choices I have made in the past and why they were made. In addition I want to learn how I can become an engineer who can consistently think critically and help make better impact through this gained understanding. It would also be useful for me to revise some the units such as probability as I have not done it in a little over a year and will have it as a unit in math next year.
	10	If I did I would come to the office hours to discuss about it
sean (Unregistered)	1	17549557

	7	Yes
	8	i am curious about how to make decisions because i usually taking alot time to consider my decision and regret about it.
	9	Know the outcomes of each kind of decision made
	10	No response

Claire Yu (Unregistered) 06/22/26 08:39 PM PDT	1	c1ndyu
	2	High school student
	3	Stanford Summer Session
	4	My intended major is decision science and psychology, I might take economics as my double major.
	5	I've finished the AP Calculus BC course in my current high school in Guangzhou, China (The Affiliated High School of South China Normal University). I also take a statistics course in Stanford Summer Session (STATS 110: Introduction to Statistics for the Engineering and the Sciences).
	6	No prior experience
	7	Yes
	8	I take this course because it aligns closely with my majors in decision science, behavioral economics and psychology. The quantitative, probability-based decision frameworks it teaches will directly support my ongoing research paper on self-nudging and cognitive biases. I also want to learn structured tools like influence diagrams to frame uncertain real-world problems, quantify risk preferences, and evaluate decision quality. Beyond technical skills, I am eager to explore the limits of rationality and ethical considerations in human choice, which are essential to my academic study of behavioral judgment. In addition, I find out that there are philosophy ideas (emotional) under these rational disciplines, which is uper fun.
	9	I hope to master quantitative decision tools such as influence diagrams and probability value modeling to quantify risk and subjective uncertainty. I also want to learn how to properly frame complex decision problems and evaluate decision quality with real-world cases from finance and behavioral research. These practical skills will greatly help my research on self-nudging and cognitive biases. Additionally, I hope to deepen my understanding of bounded rationality and decision ethics, and gain hands-on problem-solving experience through class projects.(Looking forward for intensive discussions!)
	10	I've dealt with indecision my entire life. It is extremely hard for me to settle on a choice; after I make any decision, I keep doubting whether it was the best possible one and constantly worry about undesirable outcomes. This internal struggle drives my strong interest in this course. I'm so excited to learn standardized, data-backed decision tools to judge options objectively.

	5	Emma Willard School, Precalculus with Non-Routine problems: The course covers sinusoidal functions, analytical trigonometry, conics, probability and counting problems, introduction to statistics, sequences and series, more in-depth study of rational and polynomial functions, optimization problems, and an introduction to limits.
	6	Basic familiarity
	7	No

	8	When I was learning microeconomics, I found Behavioral Econ very intriguing to me, especially the topics about how those economists and "rational decision makers"(unsure if it's the right term) decide what to do based on different incentives. I am also doing research on consumer responses and how they behave when they are nudged by different medias such as ads, propagandas, and even labels on products.
	9	I hope to build a robust framework for decision-making, discuss ideas with people coming from a wide range of backgrounds, and actively listen to professional suggestions from people in this field!

	3	Stanford Summer Session
	4	finance
	5	AP statistics & AP calculus AB
	6	Completed one introductory course
	7	No
	8	I thought the course description looked interesting, and I wanted a more logic/engineering-based course in my schedule at summer session so I could experience a wide variety of types of classes. I had a little bit of prior experience with statistics and enjoyed it, and I'm looking to expand on those skills and more.
	9	I would like to learn more about the process of decision making and analysis, and expand skills related to statistics, math, etc. I also just hope to gain the experience of what it's like to take a course at a college.
